

How to Install MIDI drivers on Windows 11

How to install drivers on Windows 11

First, download the drivers from the Windows MIDI Services page.

Scroll to the bottom of the page and download the latest "Windows MIDI Services Runtime and Tools".

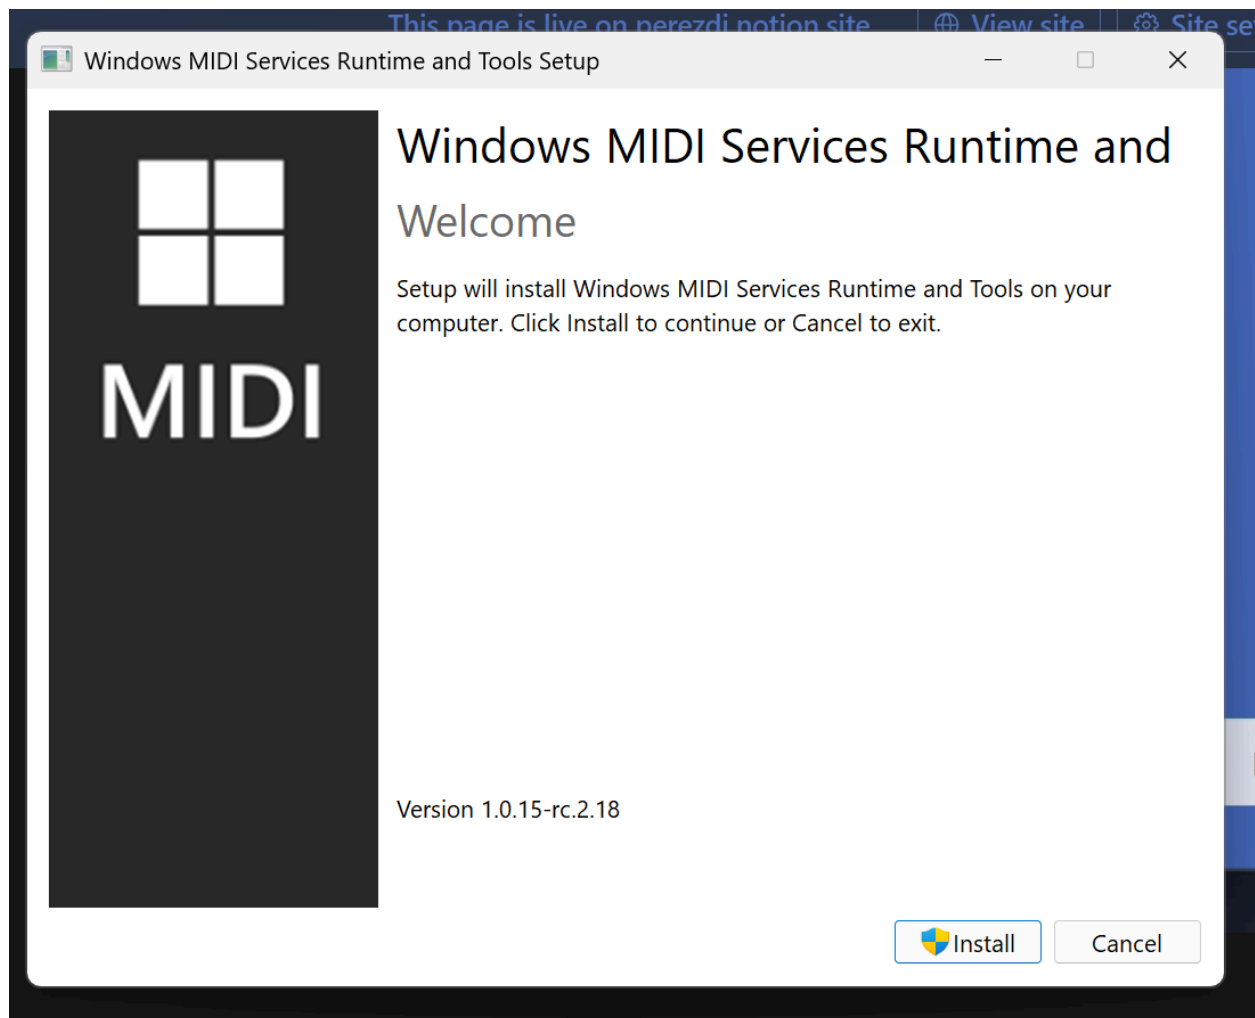

Note: Download it from "Other Available Downloads", not from the large banner that says "Windows MIDI Services is coming to your PC!".

Get Windows MIDI Services SDK Runtime and Tools

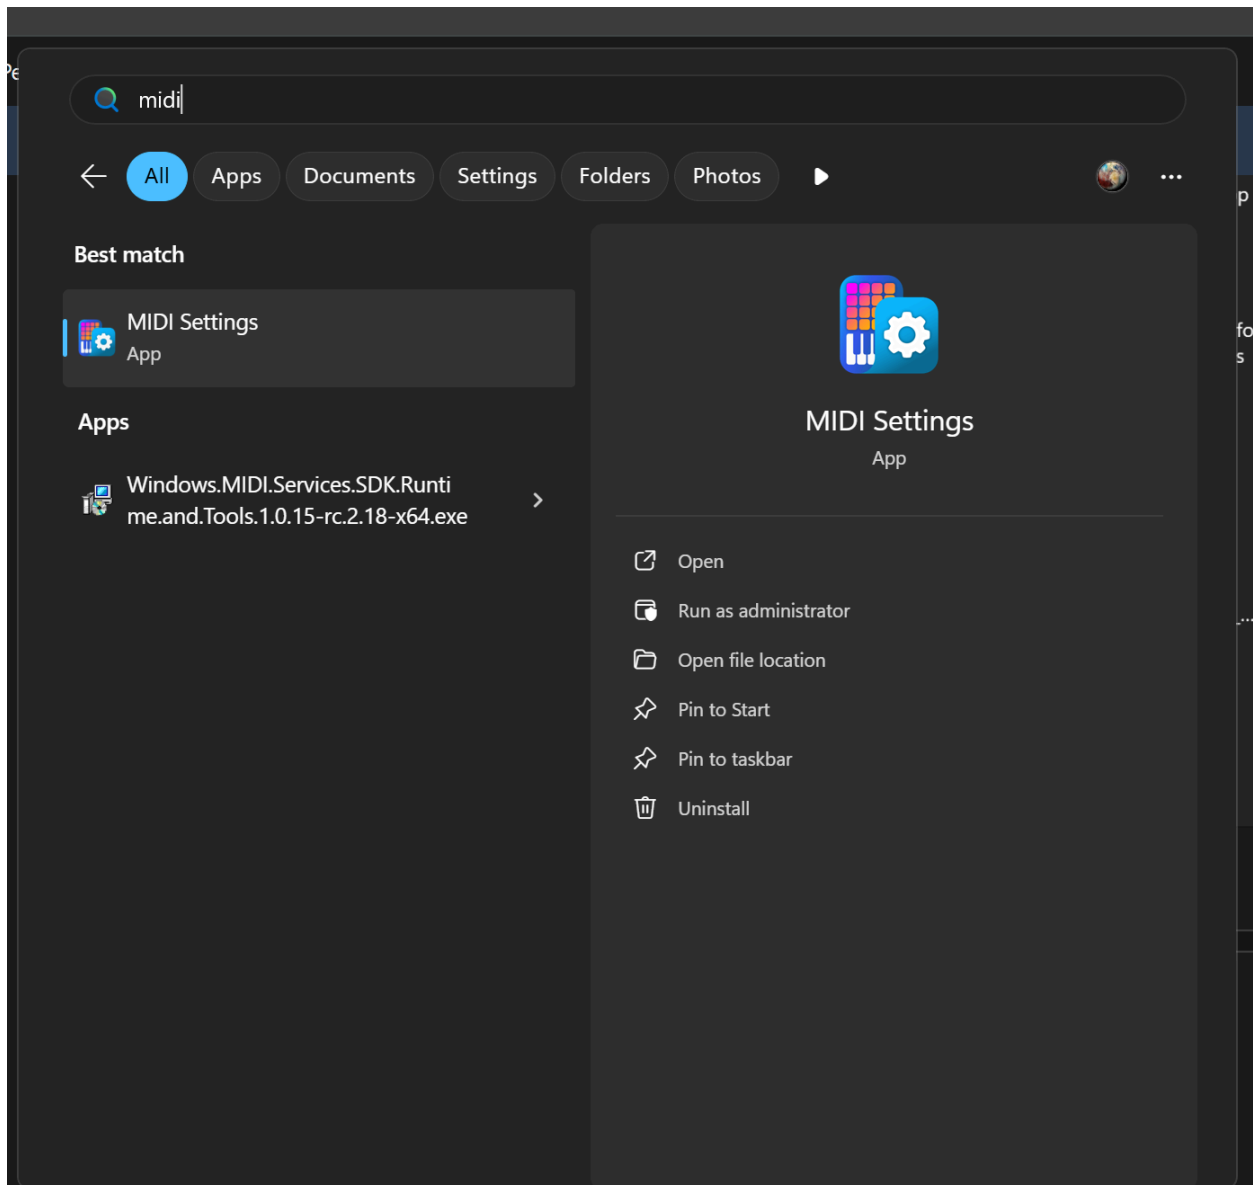

Microsoft Windows MIDI Services API, SDK, and tools

 <https://microsoft.github.io/MIDI/get-latest/>

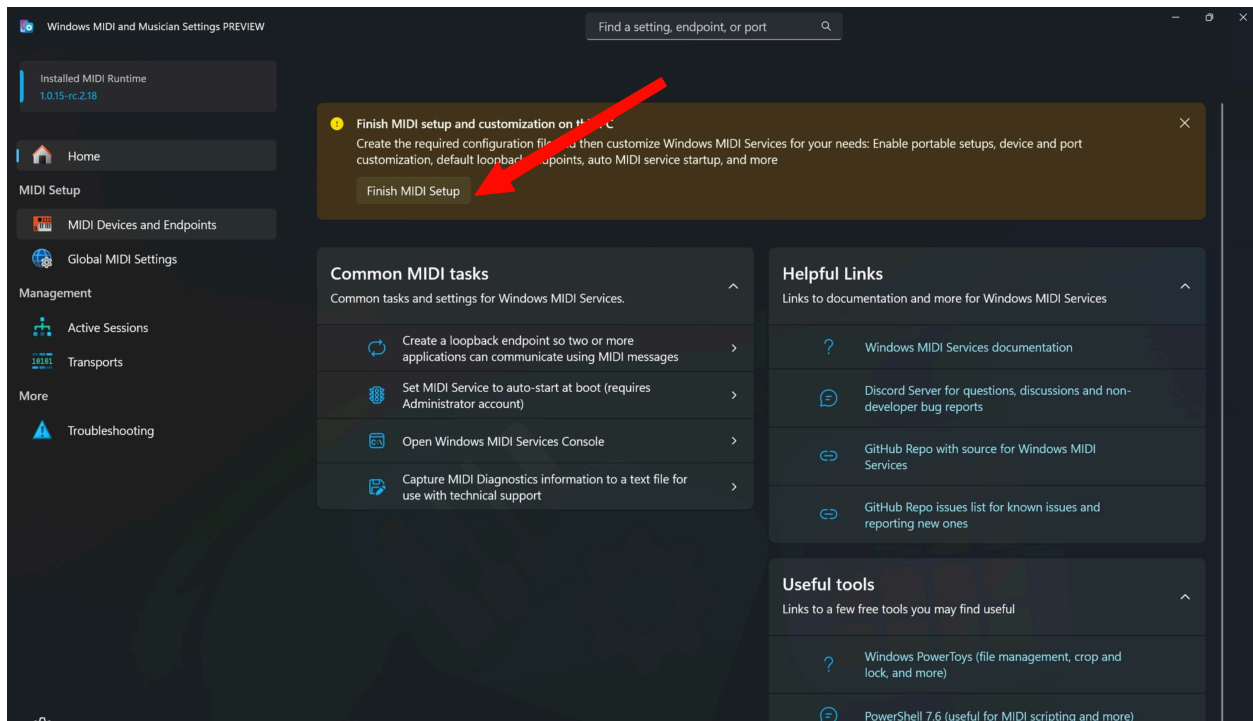

Open the installer. As **this driver is in development-mode, it will probably wake Microsoft Defender**. If it does, you can easily click on More info > Run anyway button. Open the installer, click on install, and keep on next.

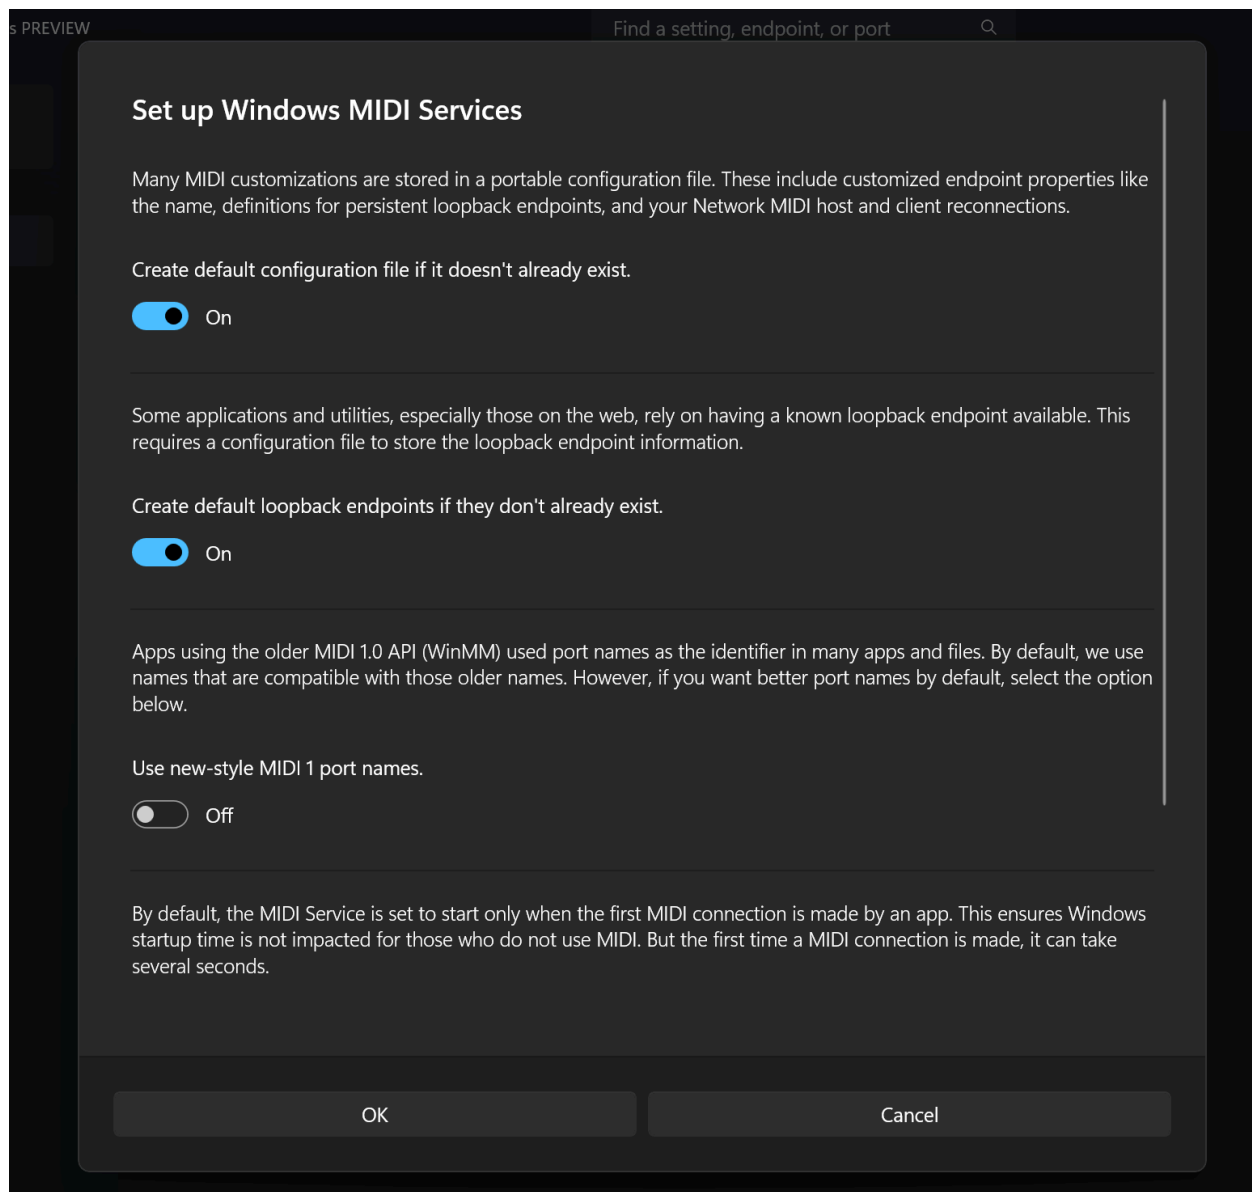

After installing, open MIDI Settings app. If it asks you to restart the pc, don't worry, you can just skip restarting.

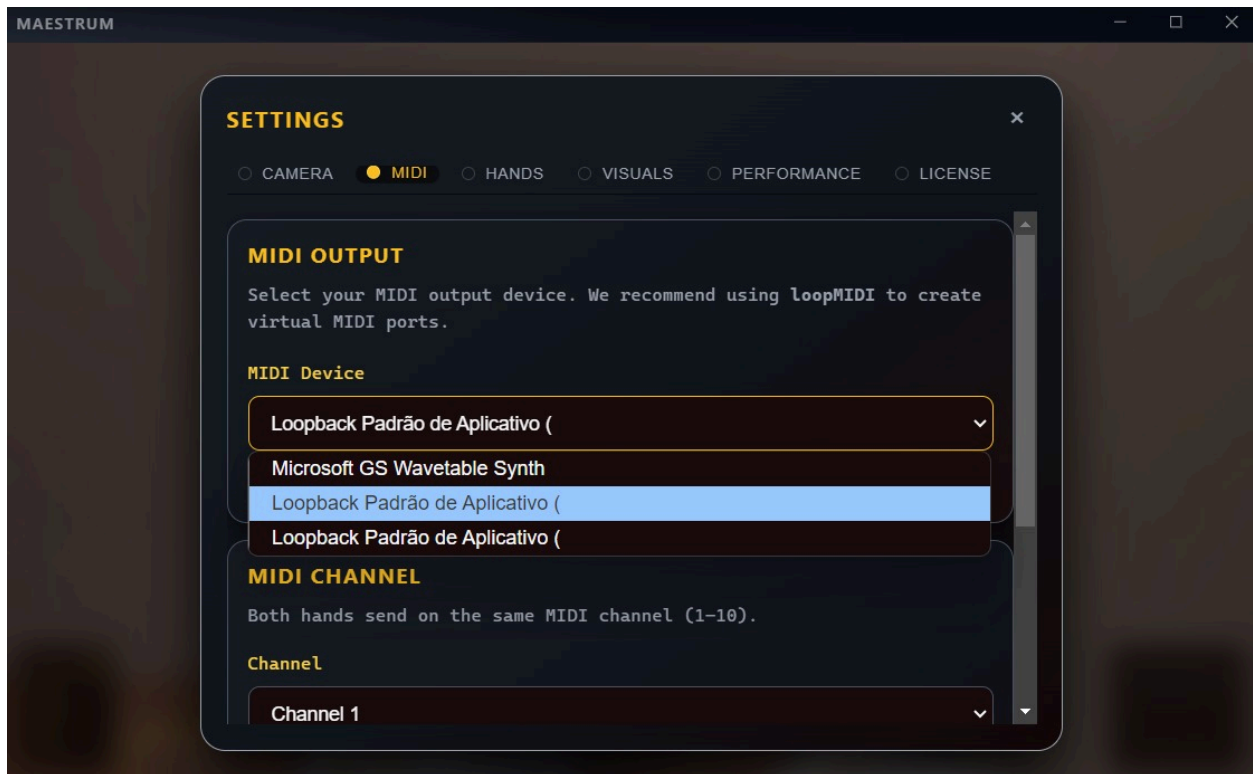

Click on **Finish MIDI Setup**

Leave the setup like this. Its important to put "Create default loopback endpoints if they dont already exist" as TRUE.

Thats all. You have installed new MIDI drivers for Maestrum. Congrats :) Download Maestrum, select Configurations > MIDI > **Default Midi Device (A)** or the device you created. In The print, its the **Loop Padrao de Aplicativo (A)**

Select on your DAW, the **Default Midi Device (B)** or **Loop Padrao de Aplicativo (B)**
You are all set. Start automating stuff using midi :)

▼ FAQ

▼ I have an Windows 10 computer

Use loopmidi.

loopMIDI

Virtual loopback MIDI cable for Windows 7 up to Windows 10, 32 and 64 bit.

<https://www.tobias-erichsen.de/software/loopmidi.html>

▼ I downloaded and just launched an weird screen. It didnt installed the MIDI Settings App.

You probably downloaded the "**enablement checker**" instead of the **Windows MIDI Services runtime and tools**.

On Windows MIDI website click on Get Latest Runtime and Tools and go to the "**Other Available Downloads**"
